Activity *Activity* Telephone - Clinical intervention - Clinical Intervention (Routine) with Patient (15 minutes)
Comment History Telephone call to daughter OPA Congenital heart team PCH Friday-no further input appropriate from the team at this time. ECG obs taken Reassured regarding heart failure management well controlled at this time. Dad tired all last week, feels he needs blood. Usual weekly cycle improves post transfusion and declines within a week. Frustrated as was waiting repeat FBC and referral to ACU for blood trasfusion- usual pattern.. Still not got Aranesp injections- Dr Kleeman aware. Renal review tomorrow 11.50
Comment Plan -Heart failure signs and symptoms stable. -Task sent to Sarah ***** to discuss anaemia monitoring for ? weekly FBC.

Activity	Activity Telephone - Clinical intervention - Clinical Intervention (Routine) with Patient (15 minutes)
Comment	History Attended ACU PCH 26/11/22 2 units RBC given without complication. Discharge plan to monitor FBC and rfer back for transfusion as needed. Repeat blood request sent from GP surgery to HCA home visiting service. Telephone call heart failure review following Bumetanide reduction. Taking Bumetanide 2mg morning 1mg at lunch. No worsening oedema Felt dizzy today stopped in bed due to this. Fluid intake around 750ml-1L most Legs weak, affecting balance. No falls or near misses. Left hand fingers numb at times. No complaints of chest pain or palpitations Still has not received Aransep -over 6 weeks now.
Comment	Plan -Increase fluid intake slowly 1250-1500mls and monitor response, aware of red flags and sos. Telephone call Monday to assess response and review diuretic management. -Daughter will contact renal secretary re Aranesp. Has OPA in a couple of weeks with renal consultant

Comment	History Home visit heart failure review. Has appointment for blood transfusion ACU tomorrow. Heart failure signs and symptoms stable. No complaints of breathlessness, does not exert himself. Leg cramps at night disturb sleep pattern. Denies orthopnoea or PND No cough or sputum No complaints of chest pain palpitations or dizziness. Frustrated with frequent urination. Peripheral oedema no worse since previous reduction of Bumetanide to 2mg morning and at lunch. Would like to reduce further.	
Comment	Examination No breathlessness observed. Chest: AE fine bibasal crackles (unchanged) Pitting oedema front shin right lower leg no oedema to left leg	
Comment	Plan -Discussed diuretic management and importance to prevent symptom deterioration. Peter very keen to reduce again as has had no declining heart failure signs or symptoms since last Bumetanide reduction. Agree to cautiously reduce by 1mg and closely monitor response. If heart failure signs and symptoms decline then increase back. -Aware red flag and sos - Telephone review arranged

Read Code	Heart rate	77.0 BPM
Read Code	Review of personal care plan	
Comment	History Home visit heart failure review, wife and daughter present. Increased lethargy over the past week, frustrated by this thinks it due to falling Hb. Blood test due but not completed as yet. Pete has contacted GP surgery and been advised that it is scheduled for next week. Would like bringing forward to avoid worsening symptoms. Still has not received Dabepoetin Alfa from Leicester. No worsening oedema since Bumetanide reduced to 2mg morning 2mg at lunch. Good urine output Elevates legs when sitting. Sleeping more during the day. Poor sleep pattern at night, recent, would like consideration of night sedation. 'Woozy' at times when standing, aware needs to be careful. Walks with rollator frame for support.	
Comment	Examination Bilateral pitting oedema to front shins, calves soft Chest: Bilateral air entry fine crackles to bases	
Comment	Plan -Telephone call to GP surgery discussion with receptionist. She will ask nurse practitioner to request blood test to be completed tomorrow to facilitate anaemia management. -No changes made to diuretics today. Advised to closely monitor for potential further decompensation of heart failure due to worsening anaemia red flags and sos advised. -Telephone follow up 2 weeks

Activity	Activity Face to face - Clinical Intervention (Routine) with Patient (50 minutes)	
Comment	History Telephone call returned to daughter Alison, advised BP, pulse and O2 monitoring within normal range. Since reducing Bumetanide to 3mg morning 2mg at lunch no worsening leg oedema. No complaints of breathlessness Main concern is since starting Flucloxacillin for finger infection has noted 'swimmy head', struggling to sleep- mind not switching off, feels tired, not frightened or over worrying. No PND or orthopnoea. Not drinking excess caffeine, one coffee in the morning otherwise orange squash during the day. Daughter advised to stop taking Flucloxacillin yesterday due to concerns. Finner leakage improving overall. Dads symptoms improving today.	
Comment	Plan - No worsening heart failure signs and symptoms since Bumetanide reduced. Due to ongoing 'Swimmy head' agree to cautiously reduce to bumetanide 2mg morning and at lunch for the next week. Home visit arranged to reassess. Red flags and sos advised.

Activity **Activity** Clinical Administration - Clinical Administration with Patient Record (1 minutes)

Comment **Comment** t/c from daughter Alison requesting to speak with Kate Grange, Community Heart Failure Nurse. Her father is experiencing a whoozy head and also not sleeping. Wondered if it could be the antibiotics he had taken for his sore finger or not? Alison said since reduction in Bumetanide legs are fine, blood pressure is fine. Task sent to Kate to contact when available.

Comment	History Home visit heart failure review as planned. Wife and daughter Alison present. Heart failure signs and symptoms significantly improved since admission. feels he is becoming over diuresed as weaker when walking and episodes of dizziness. Sleep pattern improved. Sleeps with 2 pillows for support, no orthopnoea or PND. No cough or sputum. Peripheral oedema significantly better according to Peter. Increased urine frequency. Taking Bumetanide 3mg morning and at lunch and Spironolactone 50mg once daily. Abdomen reduced in size and firmness. Appetite improving Fluid intake average 1 -1.5 litres daily. No complaints of chest pain or palpitations Concerned as has not received weekly Dabepoetin Alfa from Leicester. Had last injection 1 week ago last Sunday. Concerned as will not have again this Sunday. Alsion has been trying to chase up but not getting anywhere. Painful left forefinger nail, has been pussy, now redenned to sides, small white areas at nail bed- concerned about this. Bloods taken yesterday- waiting for results. Currently not uploaded to S1.	
Comment	Examination Pitting oedema to front shin right leg, calve soft, no oedema to left leg Chest: Bilateral air entry, Bi basal crepitations	
Comment	Plan -Telephone call to Renal secretary. Advised she will chase up with Dr Kleeman. Reassured that will not be detrimental to Peters managment not to have for a few weeks. Usual order to delivery time 4-6 weeks. Peter advised and happy with this. -Photograph taken of finger with consent to be uploaded to S1 for ANP to review ? needs antibiotics. -Due to dizziness when walking ? postural hypotension, Oedema improving advice given to cautiously reduce Bumetanide by 1mg at lunchtime and closely monitor reponse. If heart failure signs and symptoms worsen then restart. Red flags and sos explained. -Blood results to be obtained. -Telephone follow up to assess reponse next week

Comment **History** Telephone call to Sarah not needed blood transfusion for several weeks- normally has furosemide cover with this. ? symptoms resulting from worsening fluid overload. Would like advice re diuretic management. Telephone call to Mr Young. See history from January 22 Blood test today. More breathless than normal Getting around the house more difficult. Breathless when lying down. Uses 2 pillows in bed. wakes up due to PND approx 2 times per night. No cough or sputum. Feels he needs blood transfusion in ACU. Would like this asap. Leg oedema to knees. Spironolactone stopped in CCU but found it had been a help. No obvious signs of bleeding when going to the toilet Drinks well, not excessive. Minimal fluid intake, taste buds not good.

Comment **Plan** -05/08/22 admission for anaemia, spironolactone and candesartan held due to AKI- not restarted post this. U&Es 21/09/22 stable. -Task sent to Sarah ***** at Wansford surgery to review blood results and expedite ACU for transfusion.

Activity	Activity Clinical Administration - Assessment with Patient (40 minutes)
Comment	History Noted URGENT task from GP practise. Task from Sarah ***** Paramedic as GP surgey. Task - full of fluid very SOB can we rv please. Noted on S2 1437 - Telephone triage - noted very SOB increased fluids in chest he feels, awaiting rpt FBC but feeling more SOB at rest. Urgent task to HF Nurse rv FBC Monday . Urgent response task sent back to to sender. Informed they need to escalate as needed as they have had telephone consult with patient.
Comment	Plan Heart Failure initial assessment booked for Monday. GP practise to escalate as needed.

 (30 minutes)
 Comment History GP referral. Referral reason for rv as worsening leg oedema and struggling with this. On LTOT. Previously referred to the Heart Failure service. Referral declined in 1/22 and discussed with Nurse Consultant LW. Advice given to GP at this time to consult with Cardiologist for A&G as HFpEF there would be nothing else we would add to his care at this time. Ongoing Anemia, unrepaid ASD with pulmonary Hypertension and elevated right ventricular pressures. Having regular blood transfusions. Noted on last PCH admission due to anemia and AKI - started on Aranesp. Spironolactone stopped /held and Candesartan due to AKI. Noted last A&G from Cardiology recommended GP to continue conservative management and symptom control. Please see previous consultation for Echo, PMH.
 Comment Plan Task sent to line Manager on referral decision ? decline as our management would be the same as GP or Accept for assessment, education and symptom management

Read Code	Subjective T/C to patient. consented for telephone review. Patient reported that he is weak and has good days and bad days due to anemia. He has managed to do exercises and his neck and back pain is much better and thanked for help provided. Patient is happy to continue with walking stick and has declined rollator frame at this time and will ask in future if he feels he needs it. As patient is unable to participate in rehab regularly discussed about what he would like to do. patient reported that he is happy to do exercises himself and doesn't need any further input. So advised patient about discharge. he agreed.

	advise give,	Postural advise given	
	Hot / Cold therapy advised		
Read Code	Presenting complaint	Patient was referred for walking aid, however during assessment reported that his main issue is the pain around his neck and lower back. He reported that his mobility is not great and currently using walking stick. When discussed about walking aid, he was reluctant to have a rollator and wanted to use walking stick rather. Convinced him to trial rollator and ill order but he was still reluctant. Patient has anemia and goes for regular blood transfusion and feels tired all the time

22-Mar-2022 OLUJOBI, Adeyemi HUC IUC C&PHUC IUC C&P

Comment History call from lab wt blood test result of Hb of 69. called and pt answered phone. i introduced myself and informed pt of my reason for calling pt not pleased that i'm calling him this time of the day- says his gp normally rings him the following day if his blood count is low. admits he has been feeling tired. pt not very keen to engage wt me and not pleased wt my call considering it is late in the night. he would rather speak wt his own gp.

Comment Plan advised pt that i expect lab will send result to his gp and they will do the needful. tcb sos if SOB/unwell.

Comment Re referral from Wansford surgery, discussed with Liz Woodruff consultant heart failure nurse. As this gentleman has a history of severe anaemia, unrepai ASD with pulmonary hypertension and elevated right ventricular pressures. HFpEF. Management as previously advised by Dr Schofield was for regular blood transfusions with Furosemide cover, if breathlessness and peripheral oedema worsen he may in the longer term require home oxygen (we are unable to organise this it would be the GP). Our involvement would be for which management with loop diuretics which he is currently taking Furosemide 120mg morning, 80mg at lunch. Above NICE guidelines. Therefore we would advise the GP writes to Dr Schofield for A&G as there is nothing we would add to his treatment plan. Task sent to the surgery to advised. Discharged back to the care of GP

18-Jan-2022 ZAMAN, Talha Surgery

Comment History Noted above (as mentioned in task) Undergoing transfusions at ACU and awaiting response from A+G to cardiology sent by myself - ?LTOT Cardiology have also discharged from care although CP has kindly referred back to them (respiratory and cardiac services) 10 days ago Above BNF maximum for furosemide already
Comment Plan 1) Await response from cardiac/resp referral and if they are agreeable then can start palliative pathway as suggested 2) Patient aware to recontact with any issues in meantime

17-Jan-2022 GRANGE, Catharine CPFT Respiratory and Cardiac ServicesCPFT Respiratory and Cardiac Services

Comment History Referral from GP requesting review of heart failure management. States known heart failure, Atrial Septal defect, pulmonary hypertension-more symptomatic. NTpro BNP 1741 Echocardiogram 28/10/21 showed- Global pericardial effusion measuring up to 15mm around lateral LV. Small underfilled LV with visually low normal function. Dilated and impaired RV. Severely dilated atria. Moderate to severe TR. Large left to right flow Atrial Septal defect (ASD)(known). PMH-Atrial Fibrillation, Cardiac pacemaker, Pulmonary hypertension, Peripheral vestibular vertigo, Hearing aid, osteoarthritis of knee, Current medication- furosemide 40mg od, Spironolactone 25mg od, digoxin 125mcg od, ferrous Fumerate 210mg bd, warfarin, paracetamol Recently discharged from Cardiology 20/12/21-telephone consultation concluded-SOB when rushing. Attends ACU for blood transfusion when indicated. Blood tests for intracardiac haemolysis -ve. Cause of ongoing anaemia remains unclear. Surgeons felt no further value in additional diagnostics. Management plan concludes - 1. Severe ongoing anaemia-ongoing regular blood transfusions with furosemide cover as needed 2. Unrepaired ASD and pulmonary hypertension -HFpEF for which management is to address underlying contributory causes and treat fluid overload with diuretics. GP notes reviewed- 06/01/22 Referred to ACU as 31/12/21 Hb 79- received 2 units blood with IV Furosemide cover
Comment Plan -Discussed referral with Liz Woodruff heart failure consultant nurse. Plan- 1. Breathlessness largely anaemia driven. Pleural effusions. No other heart failure symptoms. Refer back to GP. Recommend to address underlying cause of anaemia to prevent worsening heart failure signs and symptoms. 2. Diagnosis HFpEF for which management is with loop diuretics- I note GP states left ventricular failure.(task sent to GP to advise) currently taking Furosemide 120mg morning, 80mg at lunch. Above NICE guidelines- would need cardiology opinion for further A&G. 3. May wish to refer to palliative care team

Comment	History	Feels run down and tired since morning, had history of Low Hb and needed multiple transfusions. no CP, no palpitation, normally SOB (no worsening), LL swelling is getting better now. no cough, no phlegm, no bleeding, no bruising C/O pain in left side of upper back for last 2-3 wks, increase with movement. Taking paracetamol/ ibuprofen and that is helping the pain
Comment	Examination	Alert, no distress, looks pale. HR 50, sAT 97% On RA, Afebrile. NS has done BP and reported as normal. S1+S2+0, Chest clear. some reproducible pain in left upper back likely muscular
Comment	Diagnosis	MSK pain/?anemia
Comment	Plan	repeat bloods. continue analgesia. CXR. review with results. advise to call back if not better or get worse/ CP/palpitation/ SOB/ unwell or any concerns or call 111 if ooh

16-Aug-2021 OFIAELI, Catherine Surgery

Comment History Chat with Peter; says he feels breathless was transfused on 5/8/21 had bloods done today, hb- 7.2 Hb dropping since May feels the edoxaban has a role to play in the breathless- feels warfarin was better for him. 18/8/21- 9.30am at ACU also spoke to MAU who will see him on the day to assess him - will be seen by the doctors . advised if breathlessness gets worse - to call 999.

16-Aug-2021 OFIAELI, Catherine Surgery

Comment History says he is out of breath; legs are still swollen for assessment at 15.50

16-Aug-2021 EASTWOOD, Helen Surgery

Comment History ongoing pain in knees injected in May, helped a bit but not as mobile as he'd hoped. Still relying on paracetamol and ibuprofen gel. Asking for further injections again - low dose steroid injection last time as b/l injection during covid time. Also had some queries about current breathlessness and blood transfusions - had blood taken today - feels edoxaban is to blame - last dealt with CO - asking for f2f, will d/w CO as duty if cannot see i will book in.

Comment Plan w/l for knee injections

08-July-2021 DENTON, Melanie Surgery

Comment	History See A+G from renal team - not for erythropoietin . Due bloods at end of July - if Hb has dropped below 8 will need transfusion again	
---------	--	--

01-July-2021 HALL, Gemma Surgery

Comment Comment A&G renal response- Hi His renal function is 119 umol/L. So from the renal perspective there is no benefit to be achieved with erythropoietin. I also understand he has pulmonary and systemic hypertension - so there is significant risk of CVD from the medication as well. I think you need to ask the cardiologist if he would benefit and save him transfusion KR Sourjya
